* Problem statement :-

→ Given an array, print all the subarrays of the given array.
→ Print in any order.

* Test case:-

Input :- [1, 2, 3]

Output :-
```
1
1  2
1  2  3
   2
   2  3
      3
```

* Solution :-

→ Scan the array.
→ Create an empty string (StringBuilder in case of Java) inside outer loop.
→ Start an inner loop from the current element of the outer loops.
→ Append the inner loop element to the string.
→ Print the string.

* Complexities:-

Time complexity :- $O(N^2)$
Space complexity :- $O(1)$
